

**LISTING OF THE CLAIMS:**

This Listing of Claims replaces all prior listings of claims in this patent application.

1-57. (Canceled)

58. (Currently Amended) A system for monitoring at least a portion of a blood component collection procedure in a blood component collection facility, performed upon a donor, by an operator, the system comprising:

a blood component collection instrument for collecting a blood component from the donor, the donor having a donor identifier and the blood component collection instrument having a blood collection instrument identifier;

a blood component collection kit having a blood component collection kit identifier, the blood component collection kit for collecting the blood component from the donor;

a system server being operably connected to the blood component collection instrument, the system server comprising a program having a plurality of code segments, at least one code segment for monitoring an operation of the blood component collection instrument during the operation of the blood component collection instrument;

a memory operably connected to the system server, the memory for storing information received by the system

server;

an interface operably connected to the system server, the interface further having a display for monitoring the at least one portion of the blood component collection procedure; and

a blood component collection kit inventory database for tracking the inventory of unused blood component collection kits to assist in replenishing the blood component collection kits.

59. (Previously Presented) The system of claim 58, further comprising:

a report comprising information from the memory, the information in the memory being selected from the group consisting of data blood component collection instrument data, operator data, and donor data.

60. (Previously Presented) The system of claim 58, wherein the interface comprises a reader for entering information to be transmitted to the system server and received by the program for monitoring the blood collection kit, the blood component collection kit identifier being transmitted to the system server via the reader.

61. (Previously Presented) The system of claim 58, wherein a blood component collection process number is associated with the blood component collection procedure, the donor, the blood collection kit, and the blood collection instrument, and wherein the interface transmits the donor identifier, the collection kit identifier, and the blood component collection instrument identifier to the system server.

62. (Previously Presented) The system of claim 58, wherein the interface is remotely located from the blood component collection instrument.

63. (Previously Presented) The system of claim 58, wherein a blood component collection process number is associated with the blood component, and wherein the blood component collection instrument identifier, the blood donor identifier, and the blood component collection process number are associated with the blood collection kit.

64. (Previously Presented) The system of claim 58, wherein a label is created in response to a change in status of the blood collection kit.

65. (Canceled).

66. (Previously Presented) The system of claim 63 wherein the program automatically updates the blood collection kit inventory database in response to the blood collection kit identifier being input into the interface.

67. (Previously Presented) The system of claim 58 further comprising:

a remote server operably connected to the system server via a communication network, the remote server monitoring and tracking a remote blood collection facility.

68. (Previously Presented) The system of claim 58, wherein the interface comprises a screen menu for providing information about the blood collection kit.

69. (Previously Presented) The system of claim 58, wherein the interface comprises:

a reader for entering information; and,  
a transmitter for transmitting information to the system server.

70. (Previously Presented) The system of claim 69,

wherein the interface further comprises:

a receiver for receiving information from the system server; and,

a web browser cooperating with the system server, the web browser for displaying information saved in the memory.

71. (Previously Presented) The system of claim 69, wherein the interface utilizes radio frequency to transmit to the system server.

72. (Previously Presented) The system of claim 69, wherein the reader comprises a touch pad for entering information into the program.

73. (Previously Presented) The system of claim 72, wherein the interface comprises a stylus for cooperating with the touch pad wherein written text can be entered.

74. (Previously Presented) The system of claim 69, wherein the reader comprises a keypad for entering information into the program.

75. (Previously Presented) The system of claim 69, wherein the reader comprises an optical scanner for

entering information into the program.

76. (Previously Presented) The system of claim 69, wherein the reader comprises a magnetic scanner for entering information into the program.

77. (Previously Presented) The system of claim 58, wherein the interface comprises a menu for monitoring the at least one portion of the blood component collection procedure.

78. (Previously Presented) The system of claim 58, wherein the interface comprises a menu for tracking the at least one portion of the blood component collection procedure.

79. (Previously Presented) The system of claim 58, further comprising:

a communication conduit operably connecting the blood component collection instrument to the system server; and,

a web interface being operably connected to the system server, the web interface providing access to the system server for monitoring the at least one portion of the blood component collection procedure.

80. (Previously Presented) The system of claim 79, wherein the communication conduit utilizes UDP/IP.

81. (Previously Presented) The system of claim 79, wherein the communication conduit utilizes TCP/IP.

82. (Currently Amended) A computer readable medium for use in connection with an operator interface for monitoring at least a portion of a blood component collection procedure with a blood component collection kit in a blood component collection facility, performed upon a donor, by an operator, the medium comprising:

a first segment for reading information from a blood component collection instrument during and throughout the operation of the blood component collection instrument;

a second segment for storing the information from the blood component collection instrument in a system server;

a third segment for reading information from an interface;

a fourth segment for storing the information from the interface in the system server; and

a fifth segment for tracking the inventory of unused blood component collection kits to assist in replenishing

the blood component collection kits.

83. (Previously Presented) The medium of claim 82, further comprising a sixth segment for determining eligibility of the donor.

84. (Currently Amended) The medium of claim 83, further comprising:

a seventh segment for generating a bleed number;

a an eighth segment for linking the blood component collection instrument to the bleed number; and,

~~an~~ a ninth segment for linking the donor to the bleed number.

85. (Previously Presented) The medium of claim 84, further comprising:

a tenth segment for monitoring the at least a portion of the blood component collection procedure by utilizing the information received from the blood component collection instrument.

86. (Currently Amended) The medium of claim 85, further comprising:

a an eleventh segment for reading a blood component

collection kit identifier associated with a blood component collection kit;

~~an~~ a twelfth segment for storing the blood component collection kit identifier in the system server; and,

a thirteenth segment for linking the blood component collection kit with the bleed number.

87. (Previously Presented) The medium of claim 86, further comprising:

a fourteenth segment for generating a report utilizing the information received from the blood component collection instrument.

88. (Previously Presented) The medium of claim 87, further comprising:

a fifteenth segment for generating a report utilizing the information received from the interface.

89. (Previously Presented) The system of claim 58, further comprising at least one other code segment, the at least one other code segment tracking operation of the blood component collection instrument during operation of the blood component collection instrument.

90. (Previously Presented) The system of claim 89, wherein tracking operation of the blood component collection instrument comprises associating at least one of the donor identifier, the blood collection instrument identifier, and the blood component collection kit identifier with the monitored operation of the blood component collection instrument in a database.
